

Datafication / Text Mining

www.DataBoiler.com

What it is?

- Navigation across non-standardize information source(s) to pull the right data quickly
- Screening tools for suitability disclosure
- Identifying groups of similar texts
- Analyze open-ended responses
- Auto-processing of messages
- Pluck diamonds from data and meta-data for value-added opportunities!!

How you may use it

Examples:

The value of each data point can be worth \$3,000 to \$20,000 or more annually per client. It is a matter of how many and what quality of data you can extract to earn this recurring revenue, or save costs or mitigate risks.

Screening tools and disclosure solutions: open up retail distribution channel for new source of revenue.

Timely extraction of critical information for **risk mitigation**, **precognitive fraud prevention**, or simply pulling the right data, cleanse it and compile it for your various **report** needs.

Why you should care?

Because there is money to discover, you want to stake your claim.

Extraction

Explore the ocean of data

Exploitation of the known

Values in semi-structured/ un-structured/ meta-data

Beyond the data extraction, but also the business model to prepare you for value-added opportunities (17+% improvement in Revenue to Expense ratio)

Our Offerings

Datafication

- Retrieval
- Organization pattern
- Processing rules
- Tagging rules
- Data lifecycle, peak & delivery
- Quality assurance

Text Mining

- Data, counting and probability
- Clustering (Taxonomy)
- Nearest Neighbor / n-dimensional space
- Neural Networks for outlier analysis
- Feature extraction, Rule induction

Business Analysis

Data visualization, decision trees, niche crafting and opportunities rationalization.
