

DATA BOILER
TECHNOLOGIES, LLC

What we are building

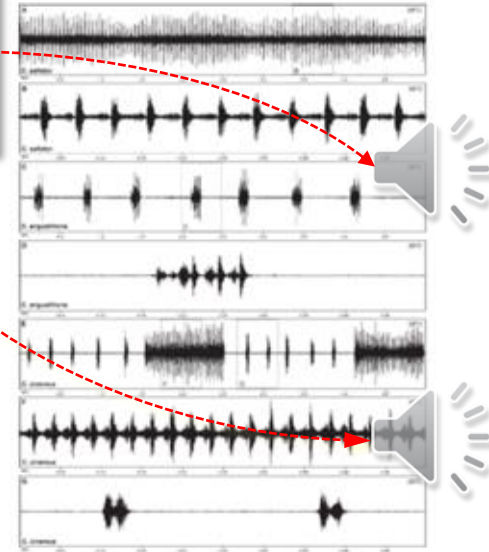

- Sound Libraries like *like*
- Inputs –entire ‘forest’ of market data (quotes & trades) from Trading Venues and/or Broker-Dealers

Ontology of the ‘forest’ and identify the toxic

- Process – clip samples that contain onset signals, each onset is denoted as a trigger or series of triggers that play in certain sequence representing a pattern, select patterns for back-testing, accept as lessons learned if false $\pm <$ threshold, organize lessons into Genres
- Outputs – a database of ‘known’ lessons, a platform where users can base algorithms on existing patterns to derive new patterns, leverage crowds’ wisdom to reduce ‘unknowns’ (e.g. flash crashes) in the market
